Sustainable Investment Trends, Green Indices & Opportunities for Hong Kong Professionals

Investors are increasingly interested in Environmental, Social and Governance (ESG) integration. Investment managers see sustainable investment as a way to improve the financial performance of their investment portfolio. What are the key factors driving mainstream investors' expanding interest in sustainable investment? And what are the opportunities to advance the dialogue between sustainable investment and mainstream investments through indexing strategies?

HKU SPACE*, FSDC, CFA Institute and HK SFA proudly present the Green Finance Forum II "Sustainable Investment Trends, Green Indices and Opportunities for Hong Kong Professionals". A number of renowned speakers will share the overall development on green finance and green bond market across the globe; implications for Asian markets, as well as the key trend in 2017 and beyond.
